

LGP220/350/50DPI-D Grouting plant and equipment

Product Description

LGP220/350/50DPI-D Grouting plant and equipment is an updated machine, based on our existing grouting station, as well as, is a combination of mixer, agitator and grout pump in one base frame. It is mainly used to be made bentonite slurry, cement slurry, etc., in the application highway, railway, hydropower, construction, mining and other ground and underground construction.

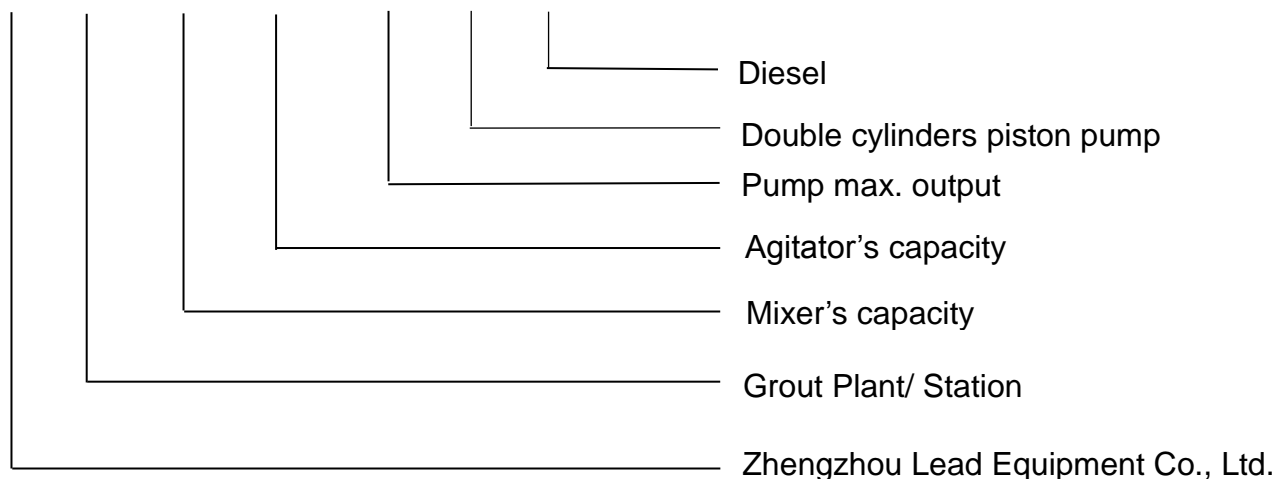

High-speed, high-shear colloidal mixer cause a vortex flow to ensures mix quickly and evenly. Water, cement or bentonite is quickly mixed into a homogeneous slurry. Then the mixed slurry was delivered to the agitator. Grout pump injects from the mixing drum (storage tank). This ensures a continuous mixing and grouting operations. The grouting plant is hydraulic drive with electric motor. Grouting pressure and displacement is adjustable. Compact size and it is easy to operate. It also takes up a small space.

Main Features

- ◆ Double cylinders piston pump with single acting to ensure the continuous slurry flowing (small pulse) and not easily leaking compared with the double acting piston pump.
- ◆ Grouting pressure and displacement is adjustable.
- ◆ The function switch between mixer and agitator is realized by using squeeze switch.
- ◆ With pressure, hydraulic oil temperature and flow sensors, over hydraulic oil temperature protection.
- ◆ Diesel and full hydraulic driven.
- ◆ PLC and HMI control.
- ◆ Solid state relay.
- ◆ Up to 5mm particle size.
- ◆ Air cooling and water cooling for the hydraulic.
- ◆ The grouting/ injection recorder with computer is optional.
