

LH100-1050B Large Output Industrial Peristaltic Hose Pump

Working principle:

LEC heavy-duty industries hose pump is a kind of peristaltic pump. An elastomeric tube is squeezed along a length by rollers that push the fluid contained within. The tube's restitution after squeezing produces a vacuum that draws fluid continuously into the tube. This creates a gentle pumping action that doesn't cause any damage to the product. Contaminations are avoided because the fluid is contained within the tube. The pump employs a rotor with rollers mounted on it that continually compress and occlude some portion of the tube. This action moves the fluid through the tube with a constant rate of displacement for each revolution of the rotor, enabling a precise measurement of the volume of fluid pumped through the tube.

The technical data of GH100-1050B peristaltic pump:

| | |
|------------------|--------------------------|
| Type | LH100-1050B |
| Max. output | 54m ³ /h |
| Rotation | 38 RPM |
| Squeeze hose ID | 100mm |
| Working pressure | 13bar |
| Voltage | 3 phase, 380V, 50HZ IP55 |
| Power | 37 KW |

The pictures of LH100-1050B peristaltic pump:

Overview

Detailed parts

For the steel couplings and SEW gearbox, if need, we could according your demands to design the couplings with stainless and use SEW gearbox

Dear Sibyl,

I hope you are doing well. We have received the pumps, and I must say we are extremely impressed with the quality. they look amazing. we have yet to install them because we are trying to figure out a way to lubricate them automatically. Has your company had any luck with this yet?

Thank you

Regards
